

Velos IoT eSIM Connect

Benefit from a modern eSIM solution together with Velos's state of the art IoT Connectivity Services with roaming on 600+ network in 180 countries. All managed efficiently in velos's Nomad Connectivity Management Platform.

With eSIM Connect, we make it easy for you to connect devices anywhere in the world. Start your journey with eSIM Connect and Velos's global connectivity and expand your coverage area and (data capacity) effortlessly with our partners' connectivity providers, as your demand increases. With Velos eSIM Connect, we offer you the best connectivity solution at all times - 2G, 3G, 4G or CAT-M1 on a global and local scale. We allow you to change between different providers.

Our Connectivity Management Platform Nomad allows you to manage your connectivity efficiently. One platform, one invoice and one tool to orchestrate all your connectivity needs. We offer you one of the best customer support teams to help you onboard, manage and improve your global deployments.

We will make sure the solution fits your business need and will assist you with device verification, to make sure your estate support all necessary eSIM requirements and are ready for successful deployment.

We are your eSIM partner for global deployments?

Unrivalled coverage

At Velos IoT, we offer one of the best global profiles. Use Velos IoT's global connectivity or some of our partner carriers' profiles to expand your coverage further.

Built for the future

Make sure to future-proof your connectivity and select a partner that helps you choose the right solution for your needs. We build to avoid the effect of 2G and 3G sunsets.

Excellent support

Our IoT Support team will verify that your module, device, firmware and application all support the eSIM requirements. In case a problem occurs, we will assist you in finding a solution.

**velos can
support all
your IoT
needs**

Simple business integration

Velos IoT's proprietary Connectivity Management Platform Nomad comes with both a UI and APIs that can easily integrate with your business.

Certified eSIM solution

Our eSIM solution is certified with the latest GSMA SGP.02.v3.2 specification and is fully interoperable with all eSIM suppliers and MNOs on the market. We offer the full range of eUICC form factors and robustness options.

Unified service

No matter if you use Velos IoT's connectivity or our partners' solutions, you always get one SIM, one invoice, one Connectivity Management Platform and one single point of contact.
